CHAINS

Preliminary to the resurvey, a diligent search was made for all corners. Identified corners were remonumented in their original positions; lost corners were restored and monumented at proportionate positions based on the original record. Coordinates for each corner were determined by Global Positioning System (G.P.S.) using relative positioning techniques. True bearings and distances were determined by inverting between the coordinates.

The geographic position of the corner of sections 34 and 35, T. 10 S., R. 4 W., which will also function as a B.L.M. control station, was determined by a tie to U.S.G.S. triangulation station "MAPLE2", by the Global Positioning System, using relative positioning techniques, is as follows:

Latitude 39° 54' 15.543" N. Longitude 112° 16' 15.010" W.
N.A.D. 1983.

The mean magnetic declination as projected from the U.S. Geological Survey Magnetic Declination Map of 1990, is 13 3/4° E.
